FUNDACIÓN BIOFÍSICA BIZKAIA / BIOFISIKA BIZKAIA FUNDAZIOA

OFFER – Postdoc position in neuroscience

Publication date: March 22, 2023

The IBF is a joint research centre of the University of the Basque Country (UPV/EHU) and the Spanish National Research Council (CSIC). In partnership with Fundación Biofísica Bizkaia (FBB), the centre focuses on advancing knowledge about the physical and chemical processes underlying biology and disease.

Offer and description of the project

Researcher will join the group to study the molecular mechanisms by which the m6A (N6-methyl-adenosine) RNA pathway dynamically fine-tunes gene expression in neurons and its role in cognition. This multidisciplinary project will combine use of molecular and cell biology, animal behavior, advanced biochemistry/proteomics, cytometry assays, and neuroimaging.

This contract will be funded by IKUR Strategy of the Basque Government and has a duration of 2 years. Candidates that have not worked /lived in our territory for more than 5 years can opt to a special tax regime than can increase the net salary: <https://www.investinbiscay.com/en/bizkaia-tax-breaks>

Required background

We are seeking a postdoctoral researcher (PhD in Biology, Molecular Biology or similar) with expertise in molecular and cellular biology, biochemistry. Experience in confocal microscopy or cytometry will be an asset. Applications should be submitted through the Biofisika website contact page (<http://biofisika.org/contact/>), adding the following subject: [Job Application: 110_Postdoc IKUR]. It is recommended that applications are made as soon as possible as they will be considered upon arrival.

Applications must include:

1. curriculum vitae adding PhD certificate
2. the name and contact address (e-mail) of at least two academic referees.

We are an equal opportunity employer committed to diversity. Applications will be considered upon arrival and the selection process will end once the position is filled

Deadline: April 5, 2023
